To launch the browser, double click on the executable .jar file. If it's not executing right click on the .jar and select open with Oracle Java Runtime.

You can also launch the browser by importing it in IDE and compiling the "WebBrowser" class.

All the .java files(source code) are located in ~/simple-web-browser/src/org/ness/
All the configuration files are located in /simple-web-browser/src/
There are three configuration files :
bookmark.txt - used for the bookmarks.
config.txt- used to define the homepage
history.txt - used for the history
